INFRASTRUCTURE.

Number of Floors: 3

Size: 176,831 RSF

Floor Plate: 59,199 RSF

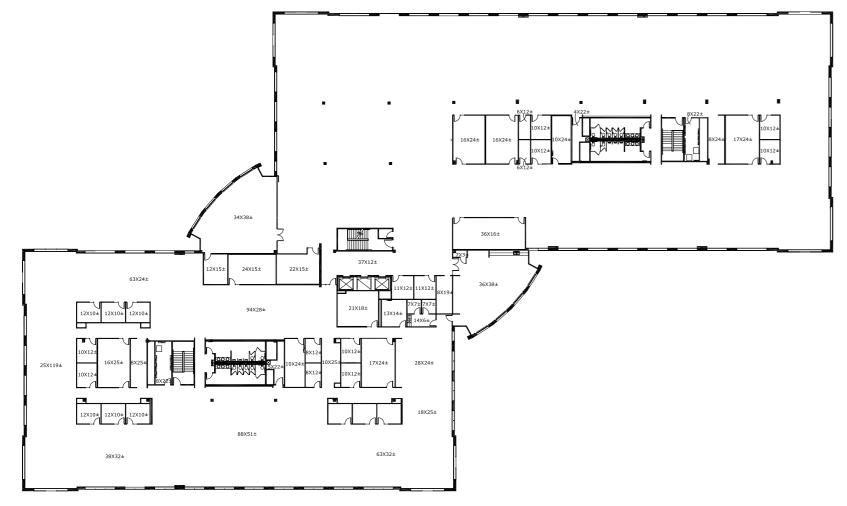

Lot: 8.75 AC

Generators: Diesel-powered Caterpillar Model 3412 750-kW generator, installed in 2000. The generator has a 750-gallon above ground (Belly-Tank) fuel-storage tank and is maintained by Holt/CAT.

Power: Electrical service is provided via underground feed from a pad-mounted transformer near Jupiter Road. Incoming service feeds a 4000-amp distribution panel rated at 480/277v, 3 phase, 4wire located in the main electrical room in the west wing of the building. Service is dual feed from an Automatic Transfer System (ATO).

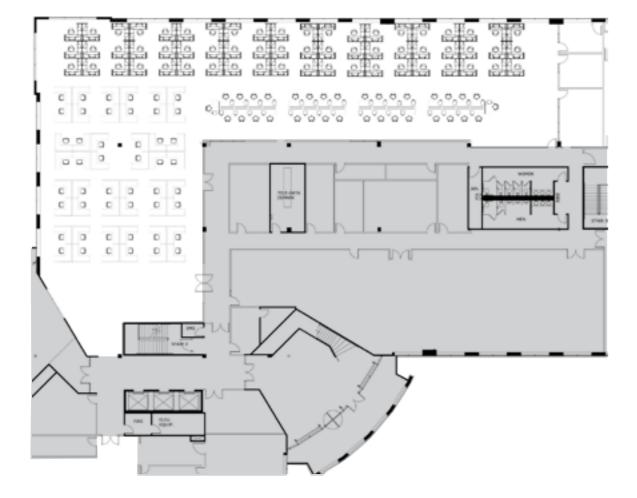

HVAC: The building has a total of seven Trane rooftop air conditioning units with VAV and fan powered VAV terminals: one, 75-ton and two, 70-ton rooftop units supporting the west wing; three, 90-ton units support the east wing; and one, 12.5-ton unit supports the elevator lobbies on all three floors. The Central Utility Plant houses two, 250-ton Trane Helical Rotary Water-Cooled Chillers configured in lead lag to support the chilled water needs of the chilled water units and Liebert CRAH units that support the first floor lab spaces and 2nd & 3rd Floor Network closets. The chilled water system comprises of two, 250-ton chillers, two 15HP condenser water pumps configured in a lead lag operation, two 10HP chilled water pumps configured in lead lag and two stainless steel Marley cooling towers.
